

Outline

1. Introduction

Briefly introducing myself and outlining three topics: why have I chosen mathematical major, what do I love about math and what is math good for.

2. Middle section

- why do I choose math major

I studied at KCC with pre-engineering and transferred to UH majoring Mechanical Engineering. At the beginning I was plan to get a Minor in Math, when I looking at the math planning sheet, I found that taking additional eight math courses I can get a bachelor's degree in Math. That's why I choose Math major and I like math after all.

- what do I love about math

Math was my favorite subject since primary school. Not only was it useful, but also very interesting. It was interesting when I can apply the knowledge I learned to real world problems. Also, I feel good when concentrate on doing math problems, especially when work out the problems myself.

- What is math good for

Math is very useful. Subjects like Engineering, computer science or accounting also need good understanding of math. Math can be a career, I plan to get a master's degree in math and then teach in community colleges.

3. Conclusion

In conclusion, not only math knowledge and skills are useful, but also the problem solving skills we learn. It helps even when working on different fields.
